ECAT-2092T

Two-Channel Incremental Encoder Counter with Latch and Compare Function

Features

- EtherCAT slave
- Two channels, 32-bit incremental encoder counters
- Encoder counting mode: CW/CCW , Pulse/Direction, A/B Phase
- Maximum counting rate: 4 MHz
- Encoder Input: A, B, C differential or single-ended signals
- Two digital input for counter latching
- Two digital output for position compare signal trigger: single and auto-increment compare
- Encoder digital input filter
- Input level: 5V, 12V/24V with internal resistor
- Polarity setting by software for active high or active low encoder input
- A/B/C signal isolation voltage: 2500V optical isolation

Introduction

The EtherCAT slave ECAT-2092T is an incremental encoder counter which provides two independent high-speed counter channels. It reads the pulse train generated by an incremental encoder and can be used in positioning feedback applications. Each channel has two counter (A, B) and one index inputs (C). The inputs can either be single-ended or differential signals. Three counting modes are supported: clockwise/counterclockwise, pulse/direction and quadrant counting mode. The 32-bit counter and the trigger level (falling/rising edge) can be configured and set by software.

A latch input (HR) for each channel allows the latching and clearing of each encoder counter.

The ECAT-2092T supports position compare: Each encoder channel is equipped with one 32-bit compare register which compares the counter position with the compare position and generates an output signal when the counter reaches or passes the compare position. The compare function supports single and auto incremental position compare. The pulse width of the compare output can be set.

Each channel has got an adjustable input signal filter for filtering out electrical noises.

Applications

- Position measurement
- Image capture
- Automated optical inspection
- Line-scan vision inspection
- Data acquisition

Hardware Specifications

Model	Specification	
Encoder Input		
Number of encoder inputs	2x encoder counter (A, B, C), differential or single-ended	
Counter resolution	32 bit

Digital Input Channel

The ECAT-2092T can accept encoder inputs from either differential or single-ended signals.

By default it is set to support differential encoder signals as they are preferred due to their excellent noise immunity. For single-ended encoder connection the ECAT-2092T provides an internal 1k Ohm resistor for each signal input. The internal resistor can be selected via jumper setting.

Counting Modes

The ECAT-2092T encoder counter supports three modes:

- Pulse/Direction counting mode
- Clockwise/Counterclockwise mode
- Quadrant counting mode
